Data Center Infrastructure Management (DCIM)

Data center infrastructure management (DCIM) tools monitor, measure, manage and/or control data center utilization and energy consumption of all IT-related equipment (such as servers, storage and network switches) and facility infrastructure components (such as power distribution units [PDUs] and computer room air conditioners [CRACs]).

Digital Business Success Will Be Driven by Economic Architecture Too many CIOs and business

executives are being influenced by the promise and urgency of digital business. While numerous projects and "transformations" are underway, many neglect a detailed examination of how their economic architectures will impact the digital revolution.

Making the Case for Software-Defined Storage in 2016

The enterprise storage landscape is progressively changing from a hardware centric architecture to a software-defined-centric architecture. Gartner positions software-defined storage as the second step, behind software-defined compute, to achieving a software-defined data center infrastructure. This webinar defines the market opportunity; the state of software defined-storage offerings as manifested by deployment as a build your own storage (BYOS) model or as an element of a hyperconverged storage system, and provides recommendations to address user skepticism and gain market traction
